Schumacher Sectionalized Knife

Sectionalized Knife

Today platforms are 30 feet or wider. Knife assemblies in one piece are very difficult to handle and transport. The SCH sectionalized knife assembly eliminates this problem.

Our sectionalized knife assemblies are made up of individual sections. The longest single section is a little less than 9 feet long and can be transported in a car or shipped by courier.

A special connector bar joins the pieces fast and securely.

SCH Easy Cut sectional knife assemblies have only bolted sections. This also makes for a quick and easy replacement of individual knife sections or whole knife assembly segments. This is cost effective, and the individual parts are easy to replace.

The Advantages of the Sectionalized Knife Assembly:

- Fast and secure connections
- Quick and easy replacement
- High strength connector
