- Right End 20", 22", 30", 36", and 38" — Jack Knife

John Deere 600 Series***

- 30" Center Assembly—Jack Knife
- Front Poly Assembly
- Back Poly Assembly

ADDITIONAL CUSTOM OPTIONS AVAILABLE!

***RIGID DESIGN:** Tip down for easy access. Single pivot point allows snout to lift for easy access for maintenance. These Poly Snouts can be used as a replacement for existing steel inner and outer snouts for all makes of corn heads. This gives you the flexibility of replacing one individual row unit in your existing poly head. Your cost savings adds up if you choose to order a full set of poly snouts.

****JACK KNIFE DESIGN:** Complete OEM Replacement with jack knife design. Double pivot points allow the points to fold up, in and down for easy access and maintenance and uses less storage space.

*** John Deere 600 Series are sold as individual center snouts only.

Replacement Poly Options

Corn Shields
For JD 90 Series Poly Head (Pair)
108-82610

Stalk roller system for John Deere® 9RX Series 4WD tractors (52")

Corn Stalk Roller

The Corn Stalk Roller, proudly serving the Midwest, is the solution you've been searching for. This innovative agricultural tool is designed to flatten, crush, and crimp corn stalks left behind after harvest, setting the stage for improved springtime planting. Our roller can be easily mounted on your corn head for efficiency.

- **Patent pending innovation:** engineered for performance with a unique, patent-pending design
- **No-till planting ready:** prepares fields for planting without disturbing the soil's natural structure—perfect for no-till systems.
- **Protects your Equipment:** reduces tire damage and wear caused by tough crop residue
- **Accelerates stalk breakdown:** speeds up decomposition of last season's residue, promoting healthier, nutrient-rich soil
- **Releases locked-in nutrients:** helps unlock valuable nutrients trapped in crop residue for better soil fertility
- **Cuts costs:** potentially eliminates a tillage pass—saving up to $22 per acre (according to Iowa State University custom rate guide)
- **Improves spring field conditions:** enhances drying time, allowing earlier and more efficient planting
- **Adaptive row rollers:** individual rollers adjust to row contours for consistent, effective residue management across the field
- **Fuel Savings:** Uses only 3.5–4 gallons per acre in no -till operations, helping reduce fuel costs and improve efficiency.

Maximize Your Field's Potential with Advanced Stalk Management.

The Corn Stalk Roller is engineered with your needs in mind. It uses spring-loaded downward pressure to effectively manage corn stalks, ensuring optimal field preparation for the next planting season.

The benefits of our roller extend beyond just stalk management:

- Solid steel construction for durability
- Sealed bearings for longevity
- Made in the USA
- Ideal for corn-to-bean and no-till practices
- Replacement parts available

Custom mounting options for various corn heads
